HISTORIC CIRCULATORY HEALTH DECLARATION
SIGNED BY LEADING GLOBAL ORGANISATIONS

• A firm commitment to tackle cardiovascular diseases (CVDs), the world’s leading cause of premature death
• Recognition that global action, national plans and a common vision are needed

Mexico City, 5 June 2016

The Mexico Declaration for Circulatory Health, the first ever global declaration on heart health, has today been made. The declaration is recognition that, unless health professionals, governments, businesses and the public find a common voice that paves the way for much-needed action now, the number of premature deaths as a result of cardiovascular diseases (CVD) will keep increasing.

Professor David Wood, President-Elect at the World Heart Federation, said: “The Mexico Declaration is an important milestone in the ongoing efforts to tackle what are largely preventable diseases. Cardiovascular diseases continue to place a huge burden on society, not just financially but also in terms of the role they play in maintaining inequalities, particularly in low to middle income countries.”

The declaration is the culmination of the Global Summit on Circulatory Health and Shared Challenges of “25 by 25” which took place on the opening day of the World Heart Federation’s World Congress of Cardiology & Cardiovascular Health (WCC 2016). Those participating in the Summit shared views on the role that political advocacy, on-the-ground interventions and collaboration need to play in ensuring that the WHO 25 by 25 goal is achieved. The significance of the need to speak with one voice underpins the core declaration.

The organisations signing the declaration include some of the world’s most respected organisations, such as the World Health Organisation and World Stroke Organisation. A host of heart societies and foundations and other health organisations have also agreed to join forces to address one of the most pressing health issues of our time. All signatories are pledging they will collaborate to support the WHO Global Action Plan to reduce deaths from non-communicable diseases and use their networks to advocate to policy makers for the funding and implementation of national action plans.
The declaration calls for governments and policymakers to take legislative action to promote healthier lifestyles and cleaner environments, promote taxation of unhealthy products and improve access to effective CVD treatments. It calls on NGOs to improve national education and training programmes to help improve diagnosis and treatment, on the private sector to commit to providing healthy and safe working environments and encourages public education to help people manage their risk of CVDs and advocate for their right to live and work in health-enabling environments.

Professor Wood said: “There is a tremendous amount of excellent work being done across the world to help reduce the incidence of heart disease and stroke, but carrying on as individual countries – or even continents - simply isn’t an option if we are to make the required impact. The Mexico Declaration sets out the need to increase the focus, commitment and funding of CVD health globally; it is vital that each and every signatory plays his or her part in improving circulatory health for all people.”

Dr Erick Alexanderson Rosas, President of the Mexican Society of Cardiology commented: “We completely back this much needed declaration and hope it will mark a major landmark in the fight against CVDs, both in Mexico and around the world. Internationally we are faced with a major CVD epidemic and in Mexico it shows no sign of slowing down – it’s vital we act now and do more to decrease major risk factors. Introducing the sugar tax was a helpful step but more needs to be done – including introducing stronger tobacco control.”

Lic. Carlos Castro, from the national patient group Asociación ALE, commented: “This is an important day not only for CVD patients in Mexico but also those at increasing risk of developing the disease. I see first-hand the damage that heart failure, heart attacks and strokes can do - we need to ensure not only that these patients receive the effective treatment they need and that their voices are heard but to prevent so many people developing these diseases in the first place.”

Ends

Notes to editors:

- *The Mexico Declaration for Circulatory Health* is available in full [here](#)
- WHO 25 by 25 goal: the target to reduce deaths from non-communicable diseases, including CVDs, by 25% by 2025
- Cardiovascular diseases (CVDs), commonly referred to as heart disease or stroke, are the number 1 cause of death around the world
- 1 in 3 deaths globally are as result of CVD, yet the majority of premature heart disease and stroke is preventable
• In 2010 CVD cost US$ 863 billion – this is estimated to rise by 22% to US$ 1,044 billion by 2030

To sign up to receive press materials or for more information contact the WCC 2016 press office team at 00 44 (0)203 861 3820 / wcc2016@grayling.com. The UK press office will be open 9am – 6pm (British Summer Time) for the duration of the Congress. Alternatively please contact the named team members below:

In Mexico (Central Daylight Time):
Please contact wcc2016@grayling.com or alternatively please call:

About WCC 2016
The World Congress of Cardiology & Cardiovascular Health (WCC) 2016 is taking place in Mexico City, 4-7 June 2016. It is the official congress of the World Heart Federation and is held every two years. It is an international forum, showcasing experts from across the globe and convening the whole cardiovascular community to discuss and implement innovative solutions on heart health and the latest developments in cardiology. For more information about WCC 2016 including the scientific programme visit the website.

About the World Heart Federation
The World Heart Federation is dedicated to leading the global fight against cardiovascular disease (CVD), including heart disease and stroke. We are the only global advocacy and leadership organization bringing together the CVD community to drive the CVD agenda and help people live longer, better, more heart-healthy lives. Working with more than 200 member organizations in over 100 countries, we strive for a 25% reduction by 2025 in premature deaths from cardiovascular disease around the world.
